

SPRINT REVIEW · SPRINT 1

JobScraper

AI-assisted job sourcing, straight from company websites.

neuefische bootcamp team · 09.10.2026

AGENDA

What we did this sprint

01

Data

Endpoints, ER diagram, proof of concept through case studies

02

Organization

Tickets, templates and conventions on GitHub

03

Code

Monorepo, frontend on Vercel and backend on Render

Our Proof of Concept (in progress)

We asked for company websites. It kept returning aggregators and job platforms instead, the very middlemen we want to avoid.

Two data endpoints we found

Wikidata

<https://query.wikidata.org/>

It returns trusted company data

Companyenrich

<https://api.companyenrich.com/companies>

It returns exhaustive company metadata

01 · DATA

Our data model

Job seekers

users, profiles and preferences

Shared vocabulary

skills, industries and locations

Companies

linked to the same skills, industries and locations

How we work together

Tickets

All work tracked as GitHub issues

Templates

Issue template, PR template and a release PR template

Conventions

Conventional Commits, PR titles linted in CI

`feature/*` · `fix/*` → `develop` → `main`

3 approvals per PR · protected branches

One monorepo, fully configured

```
job-scraper/  
├─ apps/backend NestJS API  
├─ apps/frontend Next.js UI  
├─ packages/shared shared code  
├─ packages/* tsconfig, eslint  
└─ doc/ roadmap, ADRs
```

pnpm + Turborepo

One install, one dev command

Strict TypeScript

Shared lint and format presets

Quality gates

Pre-commit hook, `pnpm check`, CI

Two skeleton apps, up and running

apps/frontend

Next.js

<https://job-scraper-capstone.vercel.app/>

Deployed to Vercel

server-to-server
calls

apps/backend

NestJS

<https://job-scraper-backend-314v.onrender.com/>

Deployed to Render

UP NEXT

Next sprint

Advance UI

Finalize Database Schema

Finishing proof of concept

Thank you.
